You 01:48 PM

What is agentic ai?

watsonx Agent 01:48 PM

Agentic AI is a type of artificial intelligence that can operate independently, making decisions and performing tasks without human intervention. It is designed to autonomously make decisions and act, with the ability to pursue complex goals with limited supervision. Agentic AI connects to enterprise data and uses sophisticated reasoning and iterative planning to autonomously solve complex problems. It consists of AI agents—machine learning models that can act on their own and adapt to situations, which makes them super cool but also a little unpredictable.
